Experience

Freelance   Aprile 2020 - Now
Web developer

My freelance career is built on a foundation of continuous learning and adaptation, enabling me to stay at the forefront of web development trends and best practices. I pride myself on my problem-solving skills, my ability to work independently or collaboratively, and my unwavering commitment to providing exceptional service and results. Whether developing a responsive website, an e-commerce platform, or a complex web application, I am passionate about leveraging my skills to help clients achieve their digital goals.

Navigare srl   October 2021 - August 2023
Web developer   Web marketing specialist
🔗 https://www.navigaresrl.com/

My initial role was that of a web marketing specialist, and I had already collaborated with Navigare srl in the past as a freelancer. Being a small company, in addition to my marketing role, I took on the task of creating the company's website, developing a customized CMS based on WordPress. Through it, the company was able to communicate information about exhibitions to all its clients. After the first year, my role evolved into that of a web developer, specifically focusing on the creation of a web app designed to provide a multilingual audio guide service to all exhibition visitors. The web app enabled the company to offer this service to thousands of visitors each day simultaneously, becoming a strong point for the company compared to its competitors. Finally, I developed an automatic DEM system by combining open-source technologies (mjml) with an SMTP service, which furthered the development of commercial relationships with schools and travel agencies.

Projects

Marvelpedia   April 2024 - Today
Portfolio project
🔗 https://marvelpedia-sallon.vercel.app/

Marvelpedia is an open-source project dedicated to one of my passions, the Marvel universe. This web app was created with the intention of experimenting and strengthening some skills related to frontend web development. Using the Marvel Comics API, I developed a React application that utilizes the following technologies:

- Vite for the project setup
- React Router for dynamic routing
- RTK Query to manage API calls
- Redux to handle the storage of some data and limit API calls
- React Bootstrap as a framework for component and styles

The project is still under development because I would like to implement more interesting features.

react, typescript, redux, rtk query, vite, react bootstrap

Sallon.it   December 2022 - Presente
My Personal website
🔗 https://www.sallon.it/

Work in Progress. I'm still working on my personal website. I'm using NextJs, Tailwind CSS for styling and Framer Motion for animation.

Tailwind CSS, Framer Motion, NextJS

Gascoigne Pub Digital Menu   July 2021 - Today
A multilanguage digital menu for a sicilian bar in Palermo.
🔗 https://gascoigne-pub.vercel.app/

This is my first project in React, i use NextJS as a platform for hosting in Vercel. It's a very simple project, it use SSG (Static Site Generation), i18n for Internationalization, and Material Design for component and styling.

material design, NextJs, React, SSG, i18n, i18n nextjs ssg material-design

Volunteering

The Free Circle   August 2023 - Now
Secretary
🔗 https://www.thefreecircle.org/

The association Free Circle comes from a large group of fans, students and professionals united by a single passion: the free and open source software (FOSS).

Therefore we support and propose the exchange and sharing of knowledge, as we believe strongly every contribution we give by studying, editing or even just spreading the free software may, in the long run, take a concrete influence on the society in which we live favoring, among other things, the local economy.
